I am a Software Engineer with a strong foundation in computer science and full stack development, including optimizing user readability, experience, and accessibility. I am passionate about leveraging AI-enabled technologies and exploring opportunities in modern application development, including machine learning and prompt engineering, to drive innovative solutions.

Education

AI & Machine Learning Certification - Caltech CTME, September 2025

Relevant Coursework: Deep Learning W/ Keras & Tensorflow, Machine Learning, Essentials of Generative AI, Prompt Engineering

B.S in Computer Science - University of San Francisco, August 2023

Relevant Coursework: Computer Architecture, Operating Systems, Programming Languages, Machine Learning

Skills

Languages: TypeScript, JavaScript, Python, C, C++, Java, Swift, HTML, CSS, SASS

Frameworks and Libraries: React.js, Next.js, Django, Flask, Auth0, LangChain, Django REST Framework (DRF), SQLAlchemy, zod, Tailwind CSS, Bootstrap, leaflet, Sentry, scikit-learn, pandas, tensorflow, Node.js, Material UI, Celery, RabbitMQ, Scrapy, SwiftUI

Other: Pinecone, nginx, PostgreSQL, SQL Server, sqlite, SASS, Perforce, Unreal Engine, SendGrid, Vercel, Heroku, AWS, git, copilot, supercluster

Experience

Freelance Application Engineer

NCRHUB

August 2023 – Present

Contracted from June 2024 – May 2025 to develop a case tracking system for the Contra Costa AAPI Coalition/Able Community Development Foundation

Tools Used: LangChain, Django, Next.js, React, Pinecone, RabbitMQ, TypeScript, Python, Vercel, Heroku, PostgreSQL, Sentry, Tailwind CSS, Celery, Scrapy, Leaflet, Supercluster

- Used LangChain + LangGraph to orchestrate RAG app built on Pinecone vector database and an LLM hosted on generative model host Groq, as well as LangSmith to debug and resolve issues by analyzing the chain step-by-step
- Leveraged Django/Django Rest Framework features such as caching, middleware, request throttling, streaming responses, and more to ensure a secure, efficient and user-friendly experience
- Leveraged RabbitMQ w/ Celery to implement asynchronous task scheduling and queueing
- Optimized site accessibility as per WCAG guidelines and responsiveness using tools ranging from Google Lighthouse and axe DevTools to Vercel web analytics
- Worked to meet security standards by adopting strict Cross-Origin-Opener-Policy, Content Security Policy, and HSTS policy as well as implementing IP-address based rate-limiting/throttling and OIDC token authentication for client applications
- Made use of map libraries to create an interactable map for easier user navigation of data, alongside custom react hooks and clustering algorithms integrated with the Supercluster library, and distance formulae such as Haversine

Full Stack Engineer

Polypinion

April 2024 - October 2024

Worked on a news aggregation application that leveraged LLM API's to summarize and break down facts and bias and present the resulting information to users. I handled interface development, LLM integration, deployment maintenance, and more.

Tools Used: Flask, React, AWS, SQLAlchemy, ClaudeAI API, OpenAI API, PostgreSQL, Vercel, Google Analytics, Material UI, SwiftUI

- Developed analytics dashboards to monitor application performance and site usage metrics using the Google Analytics API
- Leveraged OpenAI and ClaudeAI APIs to process and structure text data, with a combination of prompt engineering and text processing techniques
- Applied SwiftUI to implement web interface on iOS mobile devices and Swift tools to fetch and render data
- Used Material UI components to develop a rich, responsive, and accessible web interface for prospective users
- Improved SEO using tools such as schema.org microdata, and libraries that append unique meta tags to different pages (react-helmet)
- Deployed application to AWS and Vercel, automated tasks such as running the application server and used the web server (nginx), openssl, and Certbot to proxy and authenticate requests
